PROFESSIONAL SUMMARY

Technical Project Manager and Data Engineer with 12+ years of enterprise data experience, including a decade as a hands-on Lead Data Engineer on banking data platforms and recent Technical Project Manager roles delivering data and cloud programs. Design and deliver end-to-end data pipelines (sourcing, ingestion, transformation, validation, delivery) using SQL, Python, Snowflake, dbt, Apache Airflow, and AWS. Bridge engineering execution and project management: own Jira boards and backlogs, coordinate priorities, dependencies, and timelines, and move data initiatives from requirements to production. Results include 10M+ daily events processed, 60% runtime reduction, 99.9% data accuracy at cutover, and zero unplanned downtime.

CORE COMPETENCIES

Data Engineering: end-to-end data pipelines, ETL/ELT, data ingestion, data transformation, data modeling, source-to-target mapping, data quality, data validation, reconciliation, schema governance, performance tuning, orchestration, data migration, data warehousing

Languages, Platforms & Tools: SQL, Python, Snowflake, Teradata, PostgreSQL, dbt, Apache Airflow, AWS, Azure, DataStage, Informatica, GitHub, Git, CloudWatch, Power BI, Excel

Project & Delivery: Jira, Confluence, Azure DevOps, Agile, Scrum, SAFe, Waterfall, SDLC, backlog management, engineering roadmaps, sprint planning, dependency management, timelines, SIT/UAT, release management, stakeholder management, requirements to delivery, MS Project, Smartsheet, ServiceNow

PROFESSIONAL EXPERIENCE

MUFG — Jan 2024 - Present

Technical Project Manager | Remote

- Lead delivery of banking data modernization initiatives spanning 200+ ETL pipelines and 10M+ records, owning scope, schedule, dependencies, and milestones across Agile and Waterfall teams.
- Partner with data engineers, data owners, and business stakeholders to define sourcing, ingestion, transformation, and delivery requirements for Azure Data Factory pipelines and Azure Data Lake Storage workflows, coordinating source-to-target mappings, data validation, and production cutover readiness.
- Combine project delivery ownership with hands-on SQL and Python development, partnering with data engineers to implement transformation, validation, and reconciliation workflows.
- Develop SQL transformations to integrate source data, implement business rules, and prepare curated datasets for downstream banking reports.
- Build Python scripts to automate data ingestion, cleansing, validation, and reconciliation, supporting repeatable pipeline execution.
- Develop source-to-target mappings and implement data standardization, deduplication, and null-handling rules across migration workflows.
- Implement data-quality checks for completeness, accuracy, uniqueness, and referential integrity; investigate exceptions with engineering teams and data owners.
- Troubleshoot pipeline failures and source-to-target mismatches, correct transformation logic, and validate fixes through regression testing.
- Optimize SQL queries and ETL processing by reviewing joins, filtering logic, and transformation.
- Coordinate SIT/UAT, defect triage, data reconciliation, and go-live acceptance; report 99.9% data accuracy at migration cutover.
- Own Jira boards, backlogs, and delivery reporting; coordinate engineering priorities, deliverables, and dependencies; maintain project plans, RAID logs, decision logs, and change-control records.

Experis IT — Jun 2023 - Dec 2023

Technical Project Manager | Stockton, CA

- Led a five-domain ITSM data migration, managing scope, schedule, dependencies, and cutover readiness; achieved zero data loss and 100% source-to-target reconciliation.
- Coordinated data engineering, data-quality, and business teams to deliver automated migration and validation pipelines across six Agile sprints.

- Partnered with engineers to define source-to-target mappings, transformation rules, and data-quality acceptance criteria.
- Wrote SQL queries to validate record counts, identify missing or duplicate records, and investigate source-to-target reconciliation discrepancies.
- Contributed Python scripts for data cleansing and validation, collaborating with engineers to test outputs and resolve exceptions.
- Managed Jira backlogs, technical dependencies, and migration defects, prioritizing engineering deliverables and resolving blockers.
- Oversaw SIT/UAT, trial migrations, and production cutover; used Jira and CloudWatch reporting to track defects, pipeline issues, and delivery readiness.

Cognizant Technology Solutions **Mar 2022 - Jun 2023**

Technical Project Manager | Remote

- Led technical delivery of a $500K cloud data-migration program spanning 45+ data pipelines and three AWS environments; delivered four Agile releases on schedule.
- Partnered with data engineers to define ingestion, transformation, validation, and target-loading requirements, aligning pipeline development with business rules and downstream dependencies.
- Coordinated eight source-system owners on source-to-target mappings, schema alignment, transformation requirements, and reconciliation; achieved 99.8% data integrity.
- Oversaw pipeline testing, data-quality validation, and defect resolution, working with engineers to investigate failed loads and source-to-target discrepancies.
- Drove data lineage documentation, auditability, and access-control requirements across migration workflows to support traceability and controlled data access.
- Coordinated pipeline monitoring and exception-handling improvements, reducing manual intervention by 40% while maintaining 99%+ SLA adherence.
- Managed technical dependencies, release readiness, and production cutover across AWS environments; maintained zero unplanned downtime.

Wipro Technologies **Jun 2011 - Mar 2022**

Lead Data Engineer | Data & Analytics Programs

Enterprise Analytics and Pipeline Optimization

- Built analytics data pipelines processing 10M+ daily digital events from seven sources, delivering integrated datasets for enterprise analytics and reporting.
- Redesigned sequential pipeline processing for parallel execution, reducing runtime by 60% and infrastructure costs by 25%; improved SLA adherence from 85% to 99%+.
- Developed transformation logic to cleanse, standardize, and integrate source data into analytics-ready datasets.
- Optimized SQL queries and ETL workflows by tuning joins, filters, and processing dependencies to improve throughput.
- Implemented data-quality checks and exception handling to identify incomplete records, duplicates, and transformation failures.
- Diagnosed production pipeline failures, performed root-cause analysis, and implemented fixes to maintain reliable data delivery.

Cloud Data Warehouse Migration

- Engineered the migration of 10M+ customer records from Teradata to Snowflake, integrating data from six source systems and improving query performance by 35%.
- Developed source-to-target mappings and transformation logic to preserve business rules, data types, and relationships during migration.
- Built SQL reconciliation queries to compare record counts, control totals, and field-level values between Teradata and Snowflake.
- Executed parallel-run testing to validate migrated datasets against existing production outputs and resolve discrepancies before cutover.
- Developed audit reports and data-quality scorecards, achieving 99.9% data accuracy at go-live.
- Tuned Snowflake SQL transformations and loading workflows to support downstream reporting and analytics.

Enterprise Data Integration and Migration

- Developed migration workflows for 5M+ records across three target systems, achieving zero data loss and no critical post-go-live incidents.

- Translated 20+ business rules into 50+ reusable ETL/dbt models with peer review, scheduling, and validation controls.
- Implemented data cleansing, type conversion, and field-level transformation rules to conform source records to target schemas.
- Built reconciliation checks to validate data completeness, transformation accuracy, and cross-system consistency.
- Investigated rejected records and failed loads, corrected transformation defects, and reprocessed affected datasets.
- Executed unit, integration, and regression tests; resolved data defects identified during SIT and UAT.

Customer Data Integration and Analytics

- Developed and maintained 200+ production data pipelines across four customer analytics programs supporting segmentation, behavioral analysis, and enterprise reporting.
- Built ETL transformations to integrate customer data into consolidated datasets supporting a 360-degree customer view.
- Implemented reusable validation routines and schema controls, reducing manual effort by 30%.
- Developed SQL checks to identify missing attributes, duplicate customer records, and inconsistent values across integrated datasets.
- Maintained source-to-target mappings and transformation documentation to support data lineage and impact analysis.
- Troubleshot production data issues and documented pipeline dependencies, recovery procedures, and operational runbooks.

CERTIFICATIONS & RECOGNITION

Certified ScrumMaster (CSM), Scrum Alliance | Leadership Skills, IIM Ahmedabad | Agile Project Management & Agile Delivery
Star Performer, Wipro (2017) | Delivery Excellence Award, Wipro (2021)

EDUCATION

M.Tech in Software Engineering – Birla Institute of Technology and Science, Pilani — Jun 2011 - Jun 2015
BS in Computer Science - West Bengal University of Technology — March 2008 - March 2011
